SKF Bearings Bulgaria - Karnare Forging&Rings is a manufacturer of hot forgings and machined rings for bearings.

Rings produced in Karnare factory are components of TRB -taper roller bearings, DGBB -deep groove ball bearings, Rings for bearing units and 80% of our production is for automotive market.

Company design tools for manufacturing forgings and rings. We are growing fast and we develop and implement in production more than 30 new types per year.

QForm 2D for simulation processes of hot forging was introduced in 2014 in order to facilitate forging process and forging tools design.

Space CAD expert trained our team in very effective way and provide precious technical support.

Implementation of QForm 2D software contributes to:

- good speed of new developments
- significant reduction of tools to be reworked for new types implementation
- optimization of new and existing process and tools
- tools cost reduction and improvement of forging process

Karnare receive always good service and reactivity from Space CAD. Karnare have reached very good level of process and tools design for forging using QForm 2D.

We would like to recommend QuantorForm as a correct and reliable supplier for implementation and developing simulation software and a partner for improving forging processes.
